27<sup>th</sup> July 2021

Dear Sir / Madam,

***Re: East Anglia Marine Aggregate Projects - Industry Working Area Charts***

Further to my recent letter dated 22<sup>nd</sup> June 2021, and as a further introduction, Precision Marine Survey Limited (PMSL) have been contracted by Marine Space to provide Fisheries Liaison services, for marine aggregate projects located in the East Anglia region on behalf of the British Marine Aggregate Producers Association (BMAPA) and The Crown Estate (TCE).

The BMAPA and the Crown Estate have produced charts that show the locations of marine aggregate sites and where marine aggregate dredging activities are taking place around the UK. Please therefore find appended with this letter a chart showing the locations for all proposed marine aggregate sites located within the East Anglia region. Included within the chart are coordinates in WGS84 Degrees Decimal Minutes (DDM) and a reference for each of those areas as detailed in the appended chart. Should you require links to working area charts for other regions, these are available online at the following web address: [https://bmapa.org/issues/other\\_sea\\_users.php](https://bmapa.org/issues/other_sea_users.php).

As part of the new regional marine aggregate fishing liaison initiative, the marine aggregate industry and PMSL remain committed to maintaining high levels of fisheries liaison and engagement with the commercial fishing sector, including the advanced notification of all dredging activities to all stakeholders. However, as a result of confidentiality arising from the General Data Protection Regulation (GDPR), PMSL do not hold all the names and contact details for all local fishermen and fishing representative organisations.

To ensure that we can contact you promptly in the future and notify you of any marine aggregate activities in your region, please could I kindly request that you provide me with the your contact details and fishing activities to the email address below.

To ensure that our fisheries stakeholder database remains comprehensive and that all necessary fisheries stakeholders are provided with the relevant information with advance notice, if you are aware of any other fishermen or representative organisations, who may have fishing interests in these dredging zones, could I kindly request that you forward these details onto them. All information provided by you will be held in accordance with UK GDPR, and will remain confidential.

Whilst we appreciate that using digital versions of charts is not always the favoured option by some fishermen, PMSL wish to provide the necessary information in a format that is accessible by all, including the provision of laminated charts by post. We recognise that for some fishermen, this may be a more suitable way to reference the aggregate areas whilst at sea. Please could you therefore provide confirmation to me using the below contact details if you wish to receive laminated copies of these aggregate working area charts in the post.
